

# Setup Python Environment for debugging

Dienstag, 19. März 2019 09:40

## 1. Check Python Version in NX

NX by clicking the "Developer" tab, then Edit and pasting the following code, then checking the NX log (File/Help/Log File)

print(sys.version) #parentheses necessary in python 3.

From <<https://community.plm.automation.siemens.com/t5/NX-Programming-Customization-Forum/How-to-Debug-Python-in-NX/m-p/296251>>

## 2. Download VS and Python Version

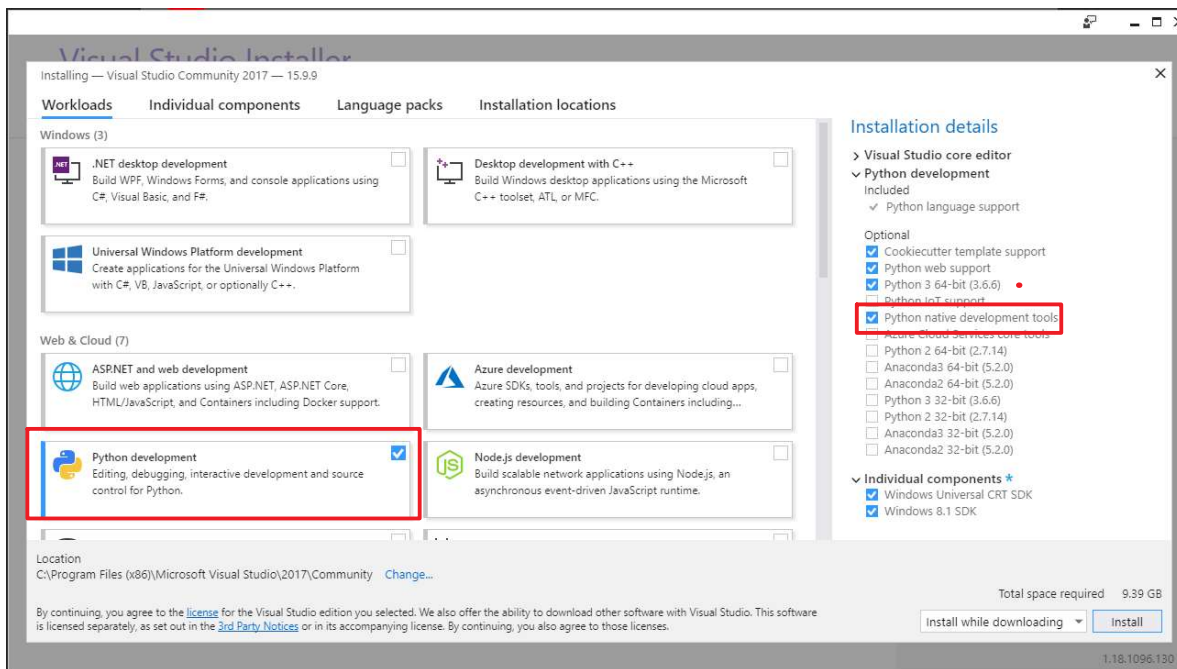

Using Visual Studio 2017 Community or any other VS Edition

<https://visualstudio.microsoft.com/vs/community/?rr=https%3A%2F%2Fwww.google.com%2F>

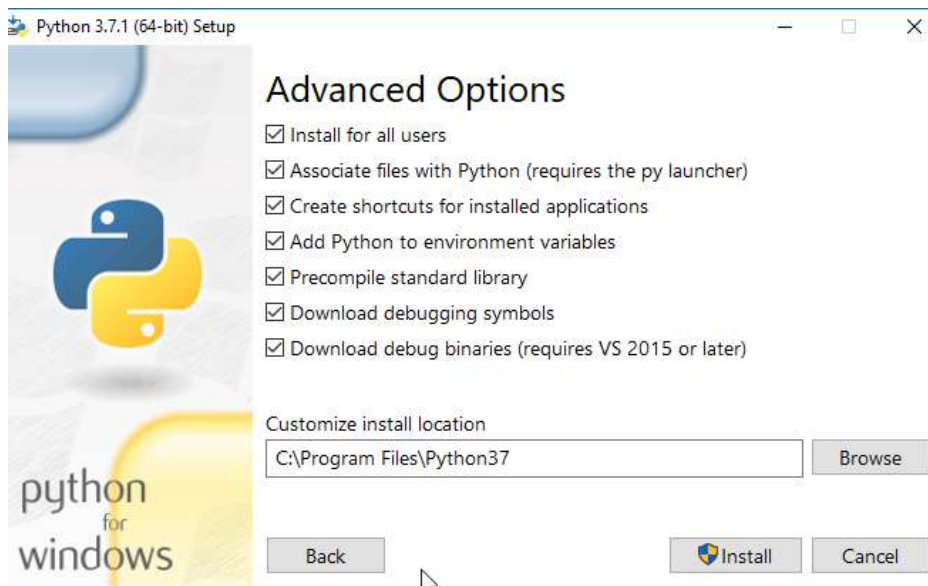

Download Python (installer and zip) from

<https://www.python.org>

## 3. Install Visual Studio

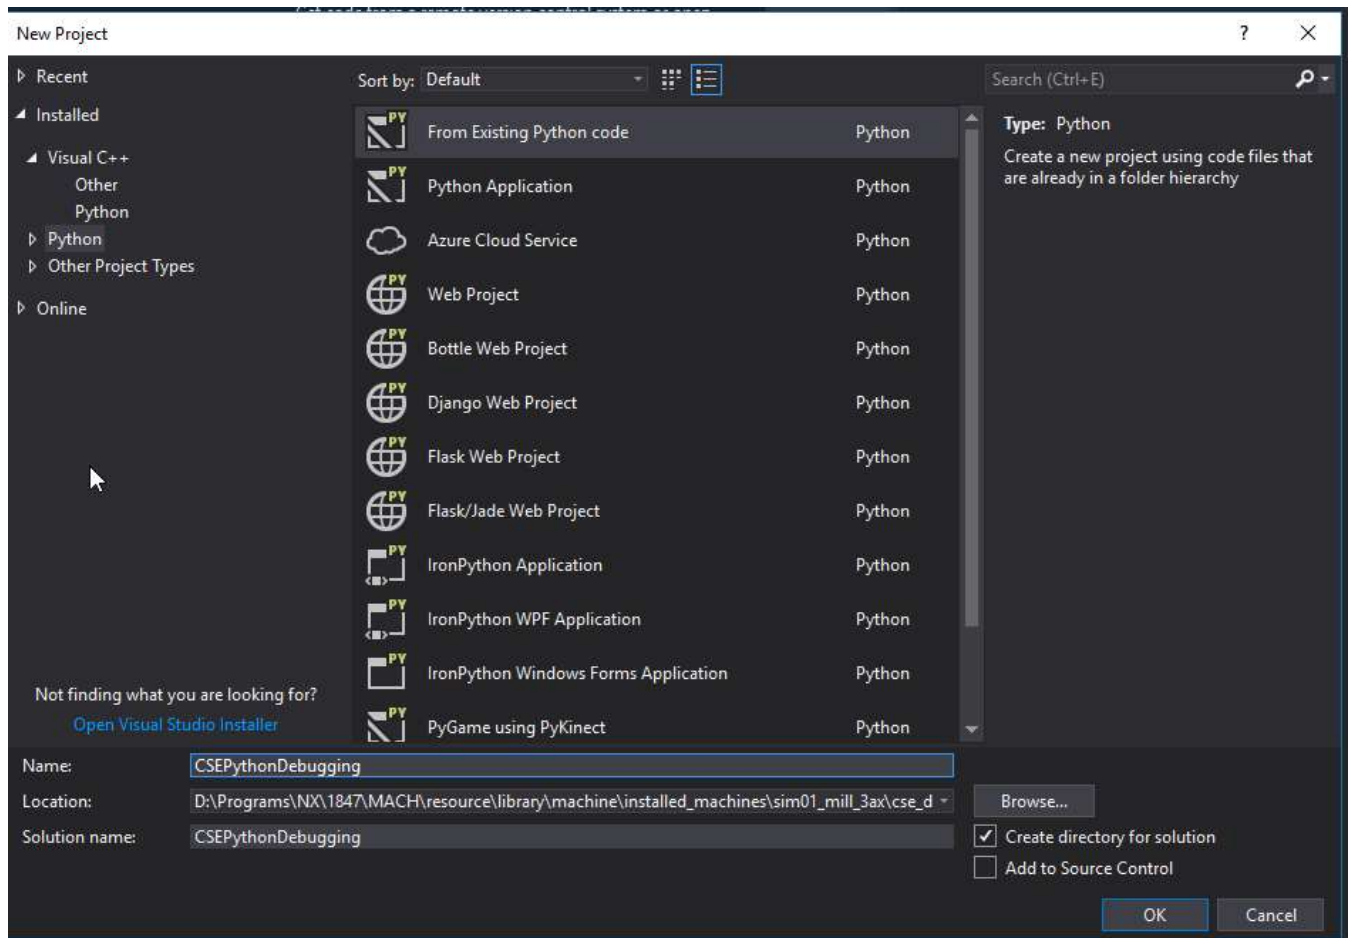

## 4. Install Python

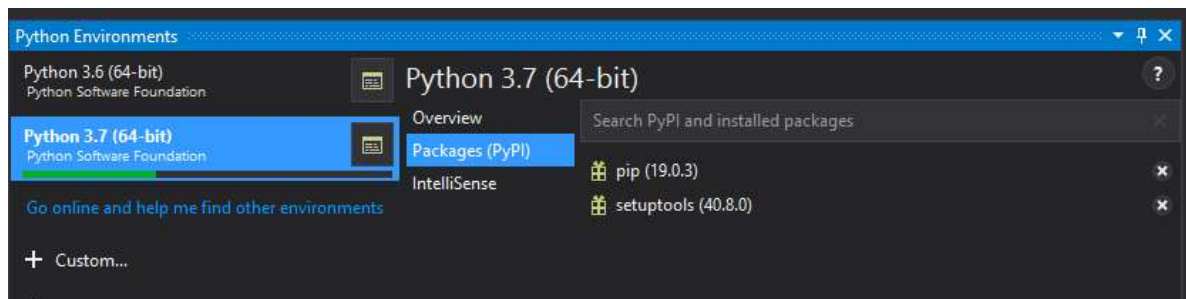

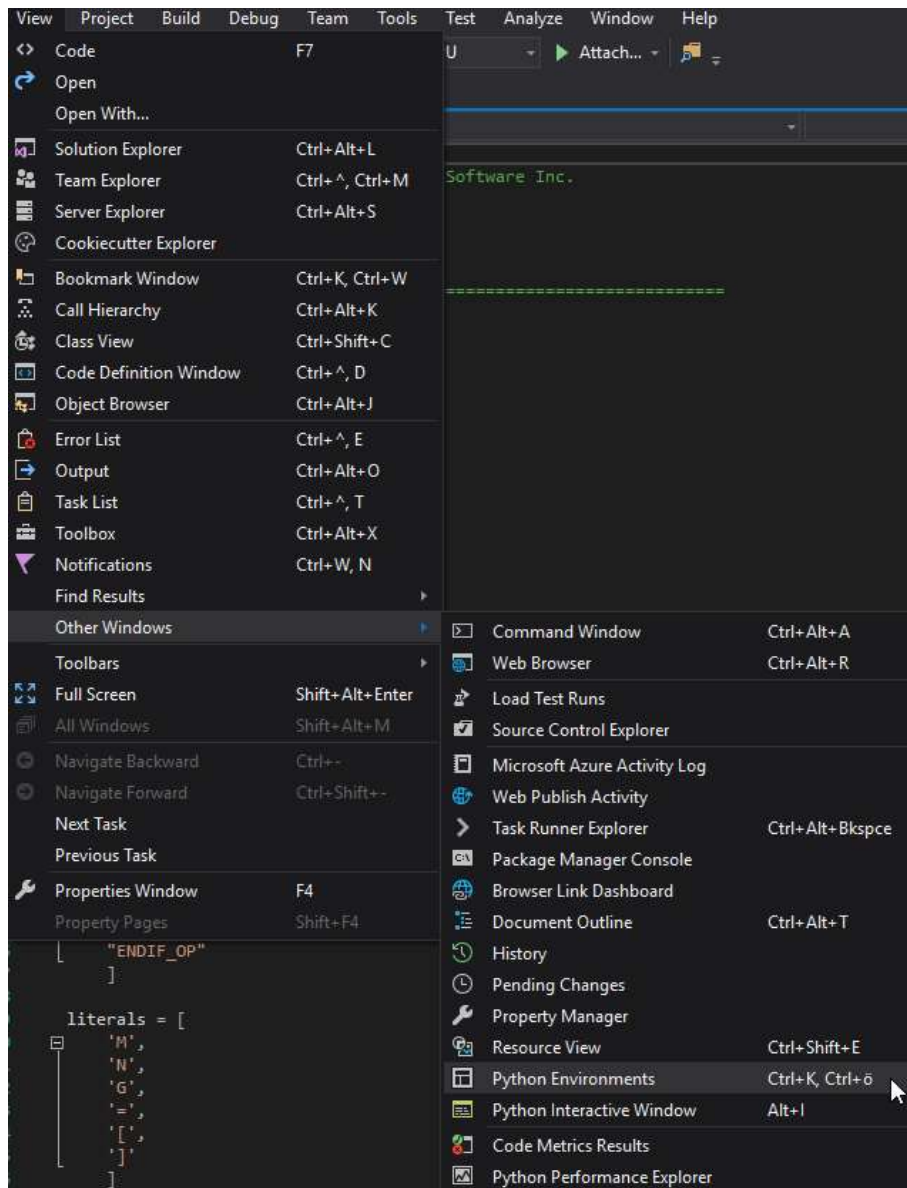

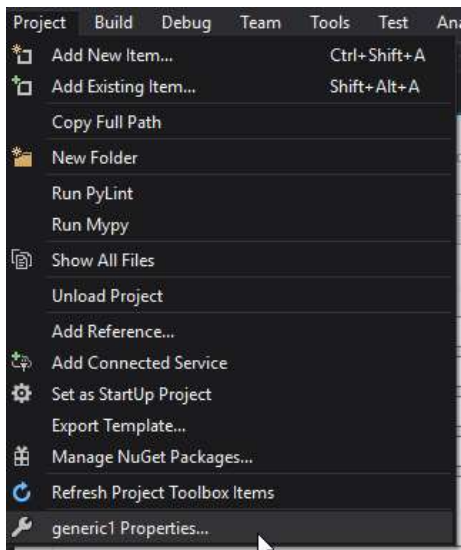

## 5. Create VS project

Select project folder where the python files are located

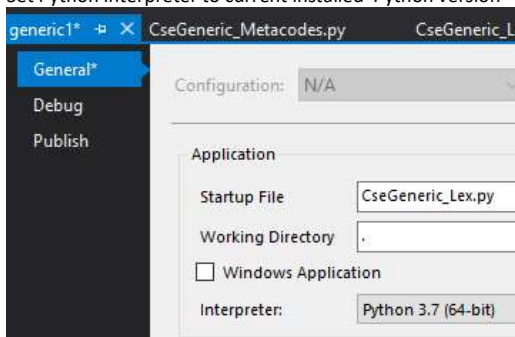

## 6. Setup Python Environment in VS

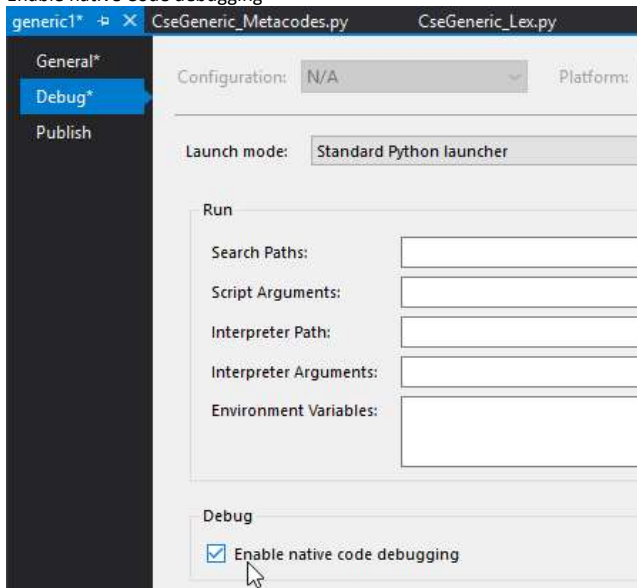

Set Python Interpreter to current installed Python version

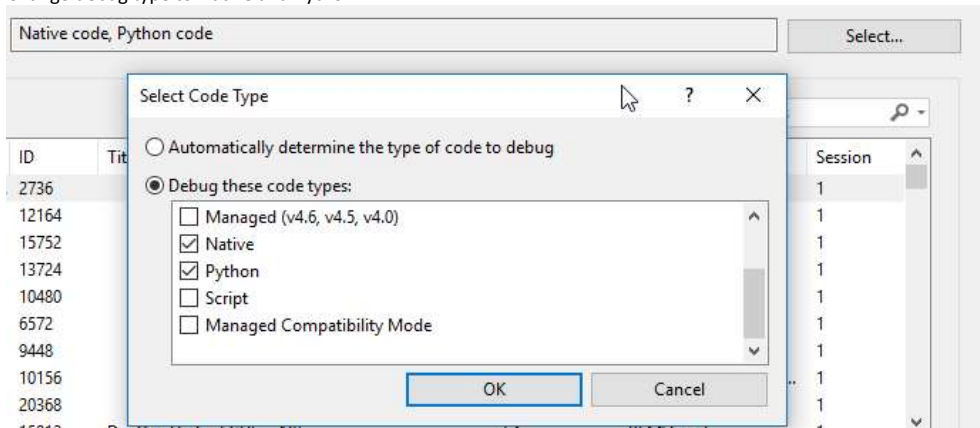

Enable native Code debugging

Start debugging by selecting 'Attach to process'

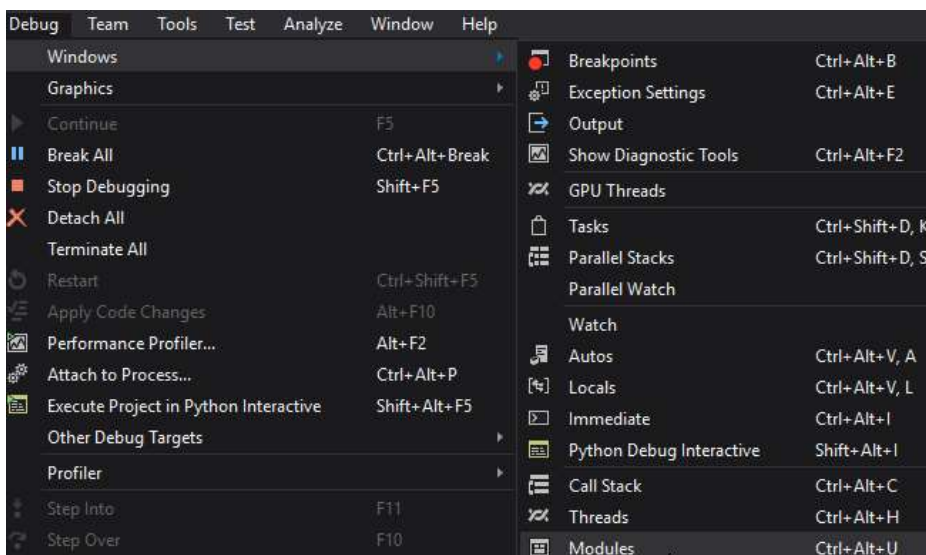

Change debug type to Native and Python

Select 'ugraf.exe' and its Python instance  
Available processes

Process	ID	Title	Type
vivaldi.exe	69344		x86
vivaldi.exe	69644		x86
vivaldi.exe	70504	Reply to Message - Siemens PLM Community - ...	x86
Video.UI.exe	78212	Filme & TV	x64
update_notifier.exe	14300		x86
unsecapp.exe	5852		x64
ugraf.exe	89868	Simulation Control Panel	Python, x64
UcMapi.exe	13324		x86
Teams.exe	32648		x64
Teams.exe	17161		x64

After attaching to the process VS will tell you that symbol files are missing --> close the dialog

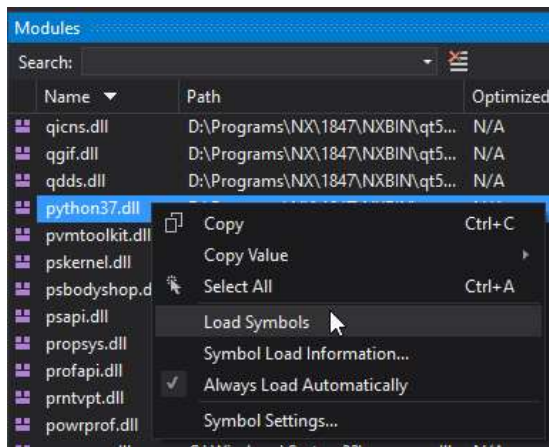

## 7. Setup NX Python Env

**Copy python37.dll and python37.zip from Python Setup Installer to python nxbin folder (backup existing dll and zip)**

Load Symbols for running python37.dll and select install path from python37

Modules			
Search: [icon]			
Name	Path	Symbol File	
qicns.dll	D:\Programs\NX\1847\NXBIN\qt5_plugins\imageformats\qicns.dll	D:\Programs\NX\1847\NXBIN\qt5_plugins\imageformats\qicns.pdb	
qgif.dll	D:\Programs\NX\1847\NXBIN\qt5_plugins\imageformats\qgif.dll	D:\Programs\NX\1847\NXBIN\qt5_plugins\imageformats\qgif.pdb	
qdds.dll	D:\Programs\NX\1847\NXBIN\qt5_plugins\imageformats\qdds.dll	D:\Programs\NX\1847\NXBIN\qt5_plugins\imageformats\qdds.pdb	
python37.dll	D:\Programs\NX\1847\NXBIN\python\python37.dll	C:\Program Files\Python37\python37.pdb	
pvmtoolkit.dll	D:\Programs\NX\1847\NXBIN\pvmtoolkit.dll		

Close Modules

Set Breakpoints at any position within the python code and run NX Application which uses python code. Within VS the execution should stop now on the breakpoint.
